

Alignment Between the University General Education Policy and Student Learning Outcomes Assessment Goals and Objectives

D.5. Integrative Capstones in Social and Behavioral Sciences

Courses: Social Science 300 (4 units)	Social Science 304 (4 units)
Social Science 315 (4 units)	Social Science 316 (4 units)
Social Science 320 (4 units)	Social Science 321 (4 units)
Social Science 325 (4 units)	Social Science 343 (4 units)
Social Science 345 (4 units)	Social Science 350 (4 units)

GE Policy	Outcomes Assessment Learning Goals
<p>The integrated learning intended with these courses is to provide students with an understanding of the interrelationships among disciplines and their applications to contemporary complex environments. Such courses will integrate, develop, and explore the implications of the skills and knowledge acquired in the lower division courses, in effect providing a culminating experience in each school by building upon that knowledge and those skills taught in the lower division General Education courses. In so doing, as with the upper division electives, the Integrative Capstone courses are expected to provide a higher level of analysis than lower division courses. More specifically, these Integrative Capstone courses should also:</p> <ol style="list-style-type: none"> 1. Be at the upper division level and in the large-lecture format, except when small classes are needed for off-campus offerings; 2. Extend, apply and integrate skills and knowledge gained in the basic skills and one or more of the lower division breadth areas, with prerequisites limited to the relevant basic skills or breadth courses required within the General Education program; 	<p>Upon Completion of this requirement students will be able to:</p> <p>Goal 1. Develop an understanding of the effects of societal/inter-societal factors from the social sciences (e.g., anthropology, criminal justice, economics, geography, history, psychology, political science, sociology) as they affect contemporary social issues.</p> <p>Objectives</p> <ol style="list-style-type: none"> 1. Identify specific factors from the social sciences (e.g., anthropology, criminal justice, economics, geography, history, psychology, political science, or sociology) as they relate to contemporary social issues. 2. Analyze a specific social science issue from a multidisciplinary perspective. 3. Identify key historical sociopolitical events that have influenced past and contemporary social issues. <p>Goal 2. Develop an understanding of how cultural, economic, religious, political, and social structures/practices affect the standing of various groups in the United States or in countries/cultures abroad.</p> <p>Objectives</p> <ol style="list-style-type: none"> 1. Identify key factors of social class, ethnicity, sexual orientation, religion or gender that have affected access in the opportunity structure of the United States or countries/cultures abroad over time.

<p>Education program;</p> <ol style="list-style-type: none">3. Be interdisciplinary, integrating knowledge across disciplines within and across the breadth areas, and placing each area in the broader context of human thought and social development (The cross-listing of such courses could also be done, but all must be classified within at least one of the three breadth areas.);4. Consider possible arrangements in clusters for thematic purposes, with the understanding that students must still meet the requirement of completing one such course in each of the three breadth areas. (Capstone courses may also be designated as meeting the Multicultural/Gender requirement.);5. Avoid the narrowness and specificity more appropriate to advanced courses in the program of a major, but, on the other hand, consider innovative directions and subject matter not easily included in the lower division courses;6. Where appropriate to the specific theme, incorporate multicultural and/or international issues from a comparative perspective that goes beyond a single country, culture or social system;7. Where appropriate, also include perspectives on human behavior, gender roles, and human sexuality as they relate to the theme topic, for example, either the impact of these on that topic or vice versa;8. Where appropriate, consider technological and organizational developments in relation to the theme topic; and	<ol style="list-style-type: none">2. Analyze how these factors social class, ethnicity, sexual orientation, religion or gender have affected access in the opportunity structure of the United States or countries/cultures abroad over time.
--	---

9. While breadth, integration of knowledge and skills, and topic areas that go beyond the scope of traditional courses or disciplines are key objectives for these courses, each school may determine that extent to which it wants its integrative Capstone courses to more specifically expand upon what has been taught in its lower division courses. For example, Natural Sciences courses are expected to broaden students' knowledge of fundamental laws, theories, and facts that comprise our understanding of the contemporary physical world, of the origins of scientific discovery, and the implication of scientific and technological developments
